between initial theoretical breakthroughs and their application to impactful, real-world, problems. Artificial Intelligence is one of a handful of truly cross-cutting technologies, and as such Applied AI Letters will address not only the existing Artificial Intelligence community, but also practitioners in a wide range of disciplines. Applied AI Letters will publish rapid communications covering the following three themes: 1. Emerging applications of Artificial Intelligence - first in kind applications, or examples of early adopter technology, which demonstrate the power of applying advanced AI techniques to impactful problems. Examples of this kind of article could be the development of deep learning models for pharmaceutical applications, development and use of knowledge representation techniques for advanced querying of unstructured databases, or the application of reinforcement learning techniques for advanced control problems. 2. Development and deployment of Artificial Intelligence Systems - description of algorithmic and system engineering required to deploy Artificial Intelligence technologies in a 'real world' setting. Examples of this kind of article could be security considerations for AI deployed within a healthcare setting, scalability analysis of AI technologies (for either training or deployment) of deep learning models in a high-velocity data environment such as required by Industry 4.0 strategies, or ethical considerations (such as explainability and transparency) required when deploying AI solutions into application areas such as the law and insurance, or into technologies such as autonomous vehicles. 3. Comments and Challenges for Artificial Intelligence Technology[...]
